

Toolkit for Vision & Missions

USER GUIDE · V3.8 · JULY 2026

A working tool for revising AUST's vision and mission statements. It does not write the statements for you — it holds the drafting to the criteria the scholarly literature supports, and it shows you where a draft is still weak.

Everything runs inside your browser. No account, no installation, and no data ever leaves your device.

How to start

Five minutes to your first result.

1 Open the toolkit

Visit mazhar17.github.io/Vision_Missions, or double-click the HTML file if it was sent to you. It works on a phone as well as a computer. Chrome or Edge is recommended — those browsers let the toolkit save directly back to your file. This guide is always reachable from the **User Guide (PDF)** button on the Overview tab and from the link at the foot of every page.

2 Load the sample to see how it works

Press **Load sample** in the top bar. Every box fills with a complete worked example — a proposed vision, three mission lines, the Mechanical Engineering cascade, and a full set of scores. Click through the tabs to see what a finished exercise looks like, then clear it and start your own.

3 Work through the tabs in order

The tabs are numbered because the order matters: **Vision** before **Missions**, then **Cascade**, then **Evaluate**. Grey text inside every empty box is a suggestion — start typing and it disappears.

4 Save your work to a file

Press **Save** (or **Ctrl+S**) and choose where to keep the file. After that it saves silently every 30 seconds and whenever you press Save again — no dialog. Send that one file to a colleague and they can open it and see exactly what you see.

5 Copy the record for the meeting

On the Evaluate tab, press **Copy full record for documentation** and paste into Word. That is your committee paper: the existing statements, your proposal, the mapping, the scores, and the verdict.

What each tab does

01 Vision

One sentence, settled before anything else. State the core ideology that will never change, the future you are aiming at, and an internal planning horizon — no year goes into the published sentence. Then break that future into **two to four strands**: the specific things that must become true. The missions on the next tab must each advance one of them.

02 Missions

Fill the five components — purpose, whom AUST serves, offerings, scope, distinctive capability — then compose the three mission lines M1, M2 and M3 in the form AUST already publishes. Under each line, tick the strands it advances. The panel at the foot warns you if a strand has no mission behind it, or a mission serves no strand.

03 Cascade

Accreditation never audits the institutional mission on its own — it checks whether each programme's educational objectives follow from it. Test one programme here. Enter its vision, missions and PEOs, and tick which mission line each derives from. The verdict box turns **green** when the cascade holds and **red** when it does not. Press **Load the Mechanical Engineering case** to see a real example.

04 Evaluate

Eleven criteria, each scored 1 (absent) to 4 (strong), with AUST's current statements in a locked column beside your draft so the improvement is visible as a number. Press **Apply the automatic checks** and the toolkit scores up to nine of them for you, with its reason shown — you confirm or override. Four criteria are marked **essential**: if any scores below 3, the draft is revised rather than debated.

05 Knowledge base

Every term explained in plain language with the scholarship behind it — vision versus mission, the accreditation cascade, graduate attributes, why statements drift into boilerplate. Fifteen minutes here before the first meeting puts everyone on the same footing.

06 References

The full reference list, grouped by the job each source does, so a contested criterion can be traced to its evidence.

Saving, sharing and the AI prompts

Your file is the only place your work lives

Nothing is stored on a server. **Save** writes one small file holding everything — drafts, mappings, scores. **Open...** loads it back. **Reconnect**, beside the app name, reopens the last file you used in a single click. In Chrome and Edge, saving after the first time is silent; in Safari and Firefox each save produces a fresh download, because those browsers do not permit direct writes.

Copy for sharing

Each tab has a red button that copies its contents as plain text for email, WhatsApp or Word. Colleagues need nothing installed to read it.

Copy AI prompt

On the Vision and Missions tabs this builds a prompt from what you have written, together with every constraint — word ceilings, the facts only AUST can claim, the words to avoid. Paste it into any AI tool and it returns alternatives to react to. It is deliberately a rewriter of your material, not a generator of new statements: ask an AI cold and it produces exactly the interchangeable text this exercise exists to avoid.

Three things worth knowing

1. **Score, don't argue.** When two wordings compete, put both through the Evaluate tab. The comparison decides it faster than discussion, and the record shows why.
2. **A statement that excludes nothing filters nothing.** If the draft could be used to approve any proposal at all, it is not yet doing work.
3. **Three criteria will always need your judgement** — cascade confirmation from accreditation coordinators, whether the statement can be used to say no, and whether the consultation was genuinely broad. The toolkit says so rather than guessing.

Toolkit for Vision & Missions v3.8 · runs fully in your browser · data stays on your device
